

Carlos Xavier Hernández

Senior Research Scientist · London, UK

 [github](#) |  [linkedin](#) |  [website](#) |  [email](#)

I am a Senior Research Scientist at [Meta Reality Labs](#), now based in London, with 8+ years of experience building machine learning for consumer wearables. My work on wearable [neuromotor interfaces](#) spans the full pipeline, from biosignal processing and multimodal sensor fusion (sEMG and IMU) to training, evaluating, and deploying deep learning models in production. Prior to that, I worked with [Vijay Pande](#) at Stanford on probabilistic models of biomolecular dynamics.

EXPERIENCE

Meta Platforms, Inc.

Senior Research Scientist · New York, NY, USA · 2019 – Present

- Shipped gesture recognition to consumers as the technical lead of a team of 8+ research scientists and engineers developing for the [Meta Neural Band](#) (launched Sep 2025), by designing and training deep learning models that decode real-time multimodal signals into discrete input controls for [Meta Ray-Ban Display](#) deployed on-device.
- Achieved >90% gesture classification accuracy on held-out users without the need for individual calibration, by architecting a generic LSTM-based neural decoding model trained on large-scale sEMG datasets collected from ~5,000 participants. Co-authored [peer-reviewed publication in Nature](#) demonstrating the first high-bandwidth non-invasive neuromotor interface with cross-user generalization (0.88 gestures/sec in closed-loop tests with first-time users), contributing core ML model development and evaluation methodology.
- Demonstrated viability of [EMG-based controls for users with hand tremor](#) (featured at Meta Connect 2024), by leading cross-functional accessibility data collection and analysis to show that EMG-based models can accurately decode motor intent despite involuntary movement artifacts, achieving >80% gesture classification accuracy on the population with hand tremor.

CTRL-labs (acquired by Meta, 2019)

Research Scientist · New York, NY, USA · 2018 – 2019

- Built production-grade ML training and inference pipelines for personalization of real-time gesture recognition models, by developing end-to-end data processing, training, and fine-tuning infrastructure for wrist-based sEMG decoding.
- Established foundational R&D for EMG-based neural interfaces prior to acquisition, by conducting early research on time-series signal processing and deep learning approaches for decoding motor signals into user intent.

Stanford University

NSF Graduate Research Fellow · Stanford, CA, USA · 2013 – 2018

- Authored [peer-reviewed publication in Phys. Rev. E](#) describing the Variational Dynamical Encoder (VDE), a time-lagged variational autoencoder that compresses high-dimensional time-series into a single interpretable, low-dimensional latent representation. The VDE retained over twice the mutual information with input features compared to linear methods, and on protein folding simulations resolved a slowest dynamical process 2× longer than the leading linear baseline (tICA).
- Co-developed open-source scientific computing tools widely adopted across the computational biology community, by building Python libraries for molecular dynamics trajectory analysis, Markov state modeling of biomolecular kinetics, and automated hyperparameter optimization.
- Achieved an R^2 of 0.987 and MSE of <0.1 in automated cell counting and segmentation, by training a convolutional neural network pipeline (FPN + VGG-11) with uncertainty estimation on ~10,000 microscopy images, replacing a time-intensive manual process with computer vision.

EDUCATION

Stanford University

Ph.D. in Biophysics · Stanford, CA, USA · 2013 – 2018

Advisor: [Vijay Pande](#)

Columbia University in the City of New York

B.S. in Applied Mathematics · New York, NY, USA · 2009 – 2013

SKILLS

Languages & Frameworks: Python, PyTorch, NumPy, SciPy, Pandas

Domains: Time-series modeling, biosignals, signal processing (DSP), causal inference

Methods: Deep learning (RNNs, Transformers), large-scale distributed training, fine-tuning, Markov state models, information theory

SELECTED PUBLICATIONS

A Generic Non-Invasive Neuromotor Interface for Human-Computer Interaction

P Kaifosh, TR Reardon, and **CTRL-labs** · [Nature](#) · 2025

POSTERS & PRESENTATIONS

Neural Control of Movement Society Meeting

Poster · Panama City, PAN · 2025 “Stable Control through sEMG Input: Hand Gesture Recognition on a Population with Hand Tremor”

Convolutional Neural Networks for Visual Recognition (CS231N)

Invited Presentation · Stanford, CA, USA · 2017 “Using Deep Learning for Segmentation and Counting within Microscopy Data”

Biophysical Society Meeting

Poster · Los Angeles, CA, USA · 2016 “Intrinsic Disorder in the P53 C-Terminal Regulatory Domain Yields Multiple Pathways for Folding-Upon-Binding”

Workshop on Molecular and Chemical Kinetics

Poster · Berlin, DEU · 2015 “Inferring Causality Along Transition State Pathways”

HONORS & AWARDS

- Graduate Research Fellowship · National Science Foundation · 2013
- ADVANCE Summer Research Fellowship · Stanford University · 2013
- EXROP Undergraduate Research Fellowship · Howard Hughes Medical Institute · 2012
- Genentech Summer Undergraduate Research Fellowship · Columbia University · 2011
